

SUPPLY CHAIN / VALUE CHAIN

We choose to illustrate 8 wastes by using supply chain because it's easier to identify the activities that occur throughout the business. Here is one of the supply chains that we chose (shown below).

This is a manufacturer-distributor-combined supply chain (one of the simulated situations in MonsoonSim). These activities will occur if our company choose to produce all products rather than procure and sell to the customers by our own retail stores. However, the different between the below supply chain and in-game supply chain is the red-colored activity, research and development, which this activity usually exist in the real business.
